

J-Series

CABINET SOFTENERS

Sleek compact design fits in any environment.

Model R120J

Sleek compact design fits in any environment.

These softeners are a single tank, compact design. Like all Hankschaft Runxin softeners, these can be private labeled and made in many different custom colors. All of these cabinets feature our patented ceramic disc valve, insuring years of reliability, and maintenance free usage.

J model softeners offer tool free installation and convenient operation. All units come with meter or time clock regeneration options, and only use food grade softening resin. The control valves on these cabinets come ready for long-term memory including multiple, programmable efficiency settings. They also have a 72-hour memory backup in case of a power outage.

When equipped with the F79 valve, our J Series cabinets can use upflow or downflow regeneration, and have an option for vacation mode for extended absences and automatic capacity calculation. They have a large top opening to make salt filling convenient and easy.

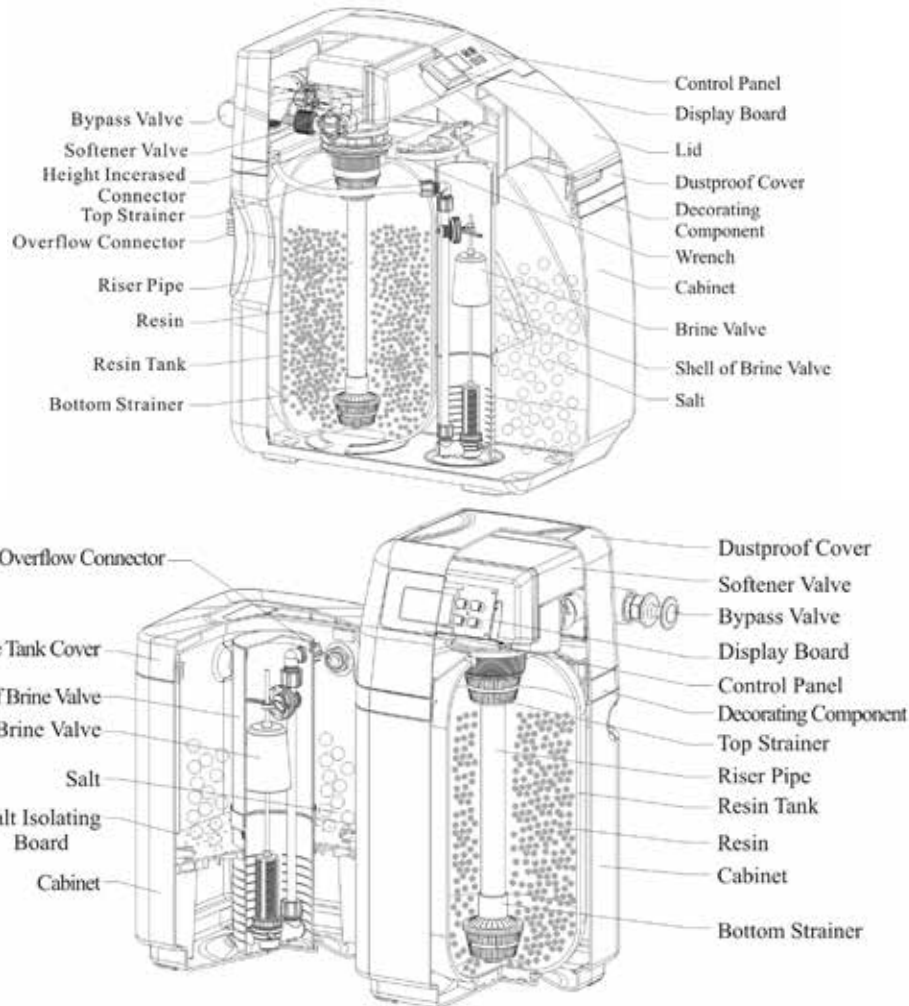

J-Series Cabinets Feature:

- Offered with either valve type
- Two compact sizes for units with limited space
- Sleek design fits into any environment
- Low maintenance with built in salt and water saving technology
- NSF is available when ordered with the F116 valve
