

R-Series

CABINET SOFTENERS

Convenient easy open cover and simple intuitive control panel.

Model R150R

Convenient easy open cover and simple intuitive control panel.

With its new square structure design, the R model cabinet softener has a modern look that fits well in all environments. Like all Hankscraft Runxin softeners, these can be private labeled and made in many different custom colors. Both of these cabinets feature our patented ceramic disc valve, insuring years of reliability, and maintenance free usage.

The new R series cabinet comes with several other new features, including a front control panel for easier operation. The control is a user friendly LCD touch screen that makes programming a breeze. A key feature to the R series cabinet softener is the F116 – RevV 2.5 valve which has a flow rate of 23 gallons per minute.

These cabinets also have a large top loading opening to make salt filling convenient and easy. The 80 S series comes with all the same great features, only in a compact size that is less than 22 inches tall. The 80 S comes with a 10 x 15 tank which holds 4/10ths of a cu.ft. of resin and treats up to 660 gallons of water per cycle.

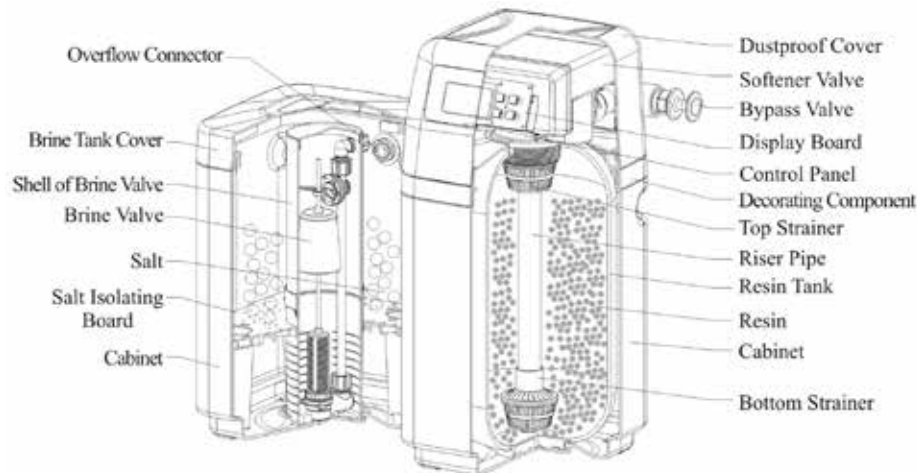

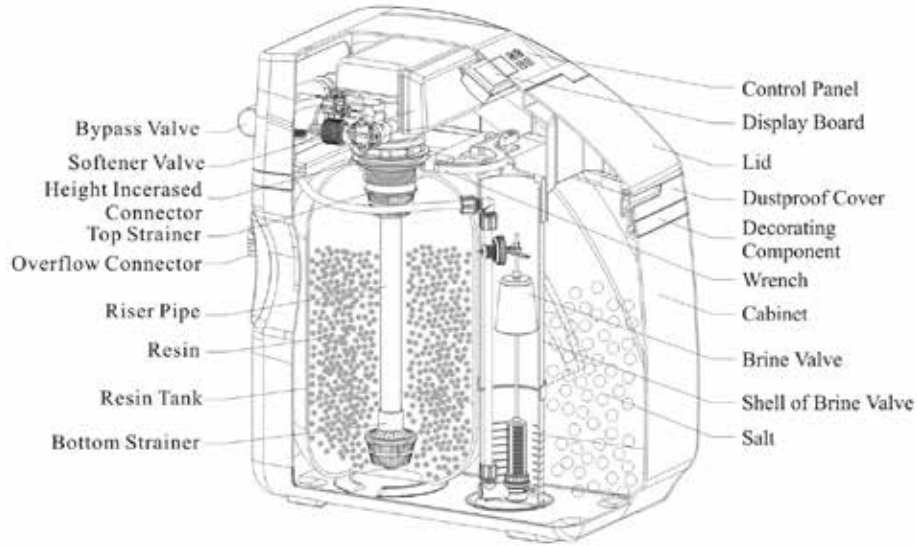

R-Series Features:

- Offered only with the F116 valve, but not NSF certified
- New LCD touch screen simplifies operation
- Sleek squared design is efficient with high performance
- Built in leak detection sensor and overflow drain
- Front pull type of disassembly for easy access and larger salt opening
